Assessment Criteria for Laboratory Reports

Grading and Point Allocation

Each laboratory report is worth a maximum of **10 points**. Any points deducted or awarded as bonus points must be justified by the reviewer in the assessment feedback, which will be sent to the student who prepared the report.

Points	Grade
0-2	1
3-4	2
5-6	3
7-8	4
9-10	5

A deduction of **0.5 points** will be applied in any of the following cases:

- The report is not submitted in PDF format.
- The file name does not follow the naming convention specified in the laboratory instructions.
- The report contains a significant number of spelling or typographical errors.
- The report is poorly formatted or lacks an appropriate level of visual quality and presentation.
- The report is excessively short (1–3 pages).
- The list of equipment and instruments used is incomplete or contains errors.
- A sign error is present in a calculation or measurement result.

A deduction of **1 point** will be applied in any of the following cases:

- The list of equipment and instruments used is missing.
- The report contains an incorrect unit, an error in the order of magnitude, or a dimensional error.
- The measured result differs from the expected value by more than **±30%**, and no relevant explanation is provided.
- The measurement could not be completed due to insufficient time, and this is explicitly stated in the report.
- A measurement result is provided, but it is not compared with the expected or theoretical value, where such a comparison is applicable.
- Figures and illustrations are not properly labeled or captioned.
- The axes of graphs or diagrams are not appropriately scaled and/or labeled with the relevant units.
- Measured data are missing from a multi-step measurement task.
- A photograph required by the laboratory instructions has not been included.
- Precise numerical values are not provided; instead, vague qualitative descriptions such as *small*, *large*, *slow*, etc. are used.

A deduction of **2 points** will be applied in any of the following cases:

- One of the required tasks is missing. This also means that no actual measurement result is provided for that task, only an expected or theoretical value.
- Figures or diagrams are hand-drawn.
- A brief description of the procedure or completed task is missing, and the report merely states that, for example, “the circuit worked” or provides a similarly insufficient description.

An additional **1 point** may be awarded in the following cases:

- The actual values of components are measured or verified where possible, the measured values are reported, and these values are taken into account in the subsequent calculations or analysis.
- The report is particularly thorough, well-structured, visually polished, and carefully prepared, while maintaining an appropriate and proportionate length.
