17.09.2026

Week	Optics lecture, Monday 14:15, F29	Optics problem solving, Wednesday 12:15, F3M01
1	Classic light models	Fermat's principle, Huygens' principle
2	Electrodynamics, wave equation	Paraxial wave equation, Gaussian beam
3	Light refraction, Fresnel formulae	Fresnel formulae, Brewster's effect, total reflection
4	Backgrounds of geometrical optics	LABORATORY VISIT
5	Paraxial approximation of geometrical optics	Paraxial approximation, matrix optics
6	Description of inhomogeneous media	PRACTICING SESSION
7	Interference (two-beam)	Two-beam interference
8	Interference (multiple-beam)	MID-TERM TEST 1
9	Scalar diffraction	Multiple-beam interferometry, Fabry-Pérot interferometer
10	Fraunhofer approximation	Scalar diffraction, Fraunhofer approximation
11	Fresnel approximation, focused beam - PROBLEM SOLVING	-
12	Statistical optics - frequency domain	PRACTICING SESSION
13	Statistical optics - time domain	MID-TERM TEST 2
14	Polarization	Anisotropy, birefringence - OPTICS LECTURE
